FOR IMMEDIATE RELEASE

LEMOORE THEATER PHOTO VOLTAIC SYSTEM

Santa Ana, California, February 28, 2012 – Intrinsic Engineering Incorporated has successfully designed and engineered a 175kW photo voltaic micro grid system for the Lemoore Theater in Lemoore California. With a flat roof and abundant sunshine, the theater was an ideal location for a PV micro grid application. In successfully implementing green technology and subsequently lowering their carbon footprint, the theater will also save considerable money in electrical utility bills each month.

The project implemented 728 Sharp 240W modules, connected by 14 module strings and supporting combiner boxes, with two Solectria inverters connected to an existing PG&E 2000A, 208/120V service panel.
